Project Title: Botanical Illustration Website - Lela Hartzman

10/25/26

Project Overview

I want to create a visually interesting and responsive microsite that looks at the history, techniques, and significance of botanical illustration. The website will combine historical botanical illustrations with a clean and more modern design.

Target Audience

Artists, designers, students, anyone interested in plants, nature, and art history

Project Goals

- Educate people about botanical illustration
- Display the beauty and detail of botanical artwork
- Make historical information easily accessible

Visual Direction

- Style: Natural, vintage inspired, minimal
- Colors: Muted green, cream, light browns
- Typography: Serif headings with simple sans-serif body text
- Imagery: Historical botanical prints, detailed botanical illustrations, scientific drawings
- Layout: Large illustrations, small decorative botanical elements

Website Structure

1. Home: Intro to botanical illustration
2. History: Origins / development over time
3. Techniques: Materials, methods, scientific accuracy
4. Famous Illustrators: Well known artists and examples of their work
5. Today: Modern botanical illustration and its importance

Design and Development Guidelines

The website will be responsive and easy to navigate. Illustrations will be the main focus, with a clear text hierarchy. I want to experiment with different image arrangements and interactive details while keeping the overall vintage botanical aesthetic
